WONDERGLASS

Éos, a work inspired by encroaching lava, takes its form from the transitional moment when molten magma becomes igneous stone – liquid to solid – once lava reaches the planet's surface. Inspired by the Gaia hypothesis which proposes that all organisms interact with their inorganic surroundings and thereby co-create a synergistic, self-regulating system to provide the bedrock for life, glass pieces are shaped by gravity to create the illusion of liquid on the brink of overflowing – spilling into being.

**Numbered edition.**

Éos is sold as an installation only, originally presented in a 7-module composition.

For future production, atelier oï will develop a bespoke creative proposal.

## MATERIALS

Cast glass

## DIMENSIONS

Ø 280 x Ø 180 x H 120 MM

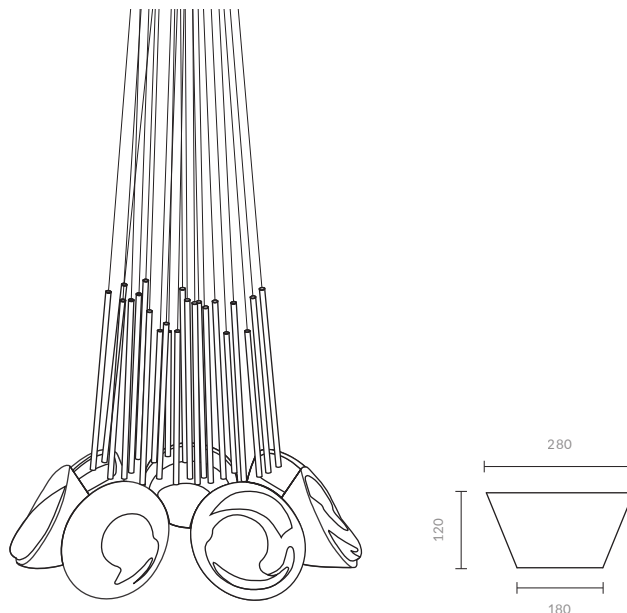

## COLOURS

Aquamarine

## LIGHT FITTING

The lighting system for Éos is developed by atelier oï expressly for Gaïa Collection and is produced by WonderGlass solely for these models.

*Bespoke solutions also available*
